There Are Many Ways To Build Yield. What Is The Most Economical?

Optimize Your Farm

Western Ag Labs wants to build a crop nutrition plan that optimizes your farm. Using the technologically advanced Plant Root Simulator (PRS)TM-Probe in conjunction with the PRSTM Nutrient Forecaster. These advanced technologies will:

1. **Measure** your field's nutrient supply rates for N, P, K, S, and the micros.
2. **Maximize** economic yield with customized crop nutrition plans that consider different weather and crop price scenarios.
3. **Understand** the best crop options for the land and crop rotation history.

Pricing

- PRSTM Nutrient Forecast and Crop Nutrition Plan **\$2.50/Ac** (Min. 80 Ac)
- Additional Management Zones **\$100/zone**

A Powerful Farm Management Tool

The PRSTM Nutrient Forecaster marries crop yield potential, soil nutrient supply and the economics of fertilizer costs and crop prices.

Working together with our Field Services Associates, create and compare crop nutrition plans under different moisture conditions and crop pricing opportunities.

Ultimately, to know is to do better.

Contact Western Ag Labs today to be connected with your local Field Service Representative.
